SQN9..., front (covers removed)

Damper Actuators

for air dampers of oil or gas burners

Reversible electromotoric actuators with torques from 0.8 to 2.4 Nm.

- Run times from 4 to 24 seconds
- Geartrain can be disengaged
- Position indication
- Easy-to-adjust end and auxiliary switches

The SQN9... and this Data Sheet are intended for use by OEMs which integrate the damper actuators in their products!

Use

The SQN9... actuators are used to drive the air dampers of small- to medium-capacity oil or gas burners.

Depending on the type of load controller, the SQN9... are used for single-wire, 2-wire, or modulating control (for details, refer to the Data Sheets of the relevant burner controls under «Connection examples»).

	To avoid injury to persons, damage to property or the environment, the following warning notes should be observed!					
	Do not open, interfere with or modify the actuators!					
	 Before performing any wiring changes in the connection area of the actuator, completely isolate the equipment from the mains supply (all-polar disconnection) Ensure protection against electric shock hazard by providing adequate protection for the connection terminals and by securing the cover Check to ensure wiring is in an orderly state Fall or shock can adversely affect the safety functions. Such actuators may not be put into operation even if they do not exhibit any damage 					
Mounting notes						
	• Ensure that the relevant national safety regulations are complied with					
Installation notes						
	Installation work must be carried out by qualified staff					
Commissioning notes						
	Commissioning work must be carried out by qualified staff					
Norms and standards						
	Conformity to EEC directives- Electromagnetic compatibility EMC (immunity)89 / 336 EEC- Low-voltage directive73 / 23 EEC					
Service notes						
	 Maintenance work must be carried out by qualified staff Each time an actuator has been replaced, check wiring to ensure it is in an orderly state 					
Disposal notes						
X	The actuator contains electrical and electronic components and may not be disposed of together with household waste. Local and currently valid legislation must be observed.					

Local and currently valid legislation must be observed.

Mechanical design

Housing	-	Made of impact-proof and heat-resistant plastic
Drive motor	-	Reversible and locking-proof synchronous motor
Coupling	- -	Drive shaft of geartrain and motor can be manually disengaged Automatic reset
Adjustment of switching points	- - -	By means of adjustable cams Scales beside the cams indicate the angle of the switching points Cams can be adjusted with the tool provided, or by similar means
Position indication	-	Via scale at the end of the drive shaft and marker on the front
Electrical connections	-	Screw terminals
Geartrain	-	Maintenance-free
Drive shaft	-	Made of sinter metal Secured to one side of the geartrain
Mounting and fixing	-	The rear of the geartrain is used as a mounting surface, fixing via through-holes Housing side with fixing holes

Do not use this type code for ordering. It shall only serve as a general guide for creating type references.

Condensation, formation of ice and ingress of water are not permitted!

Function

6/10

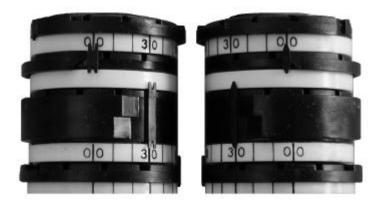

The synchronous motor drives the drive shaft and the camshaft via the geartrain. The camshaft actuates the end and auxiliary switches.

Using the associated cam, the switching position of each end and auxiliary switch can be adjusted within the working range.

Some of the actuator variants are equipped with electronic switching modules to perform auxiliary functions in connection with the end and auxiliary switches and external devices, such as controllers. The camshaft has 2 pointers for indicating the direction of rotation.

The pointers are assigned as follows:

- Double pointer \rightarrow SQN90...
- Single pointer \rightarrow SQN91...
